Project Name	SmartLender – Applicant Credibility Prediction for Loan Approval
Maximum Marks	3 Marks

Financial institutions receive a large number of loan applications every day. Manually evaluating each application is time-consuming, error-prone, and may lead to inconsistent decisions. There is a need for an intelligent system that can analyze applicant information such as income, education, employment status, credit history, loan amount, and property area to predict whether a loan should be approved. The objective of this project is to develop a machine learning-based Smart Lender system that automates the loan approval prediction process helping financial institutions make faster, more accurate, and data-driven lending decisions.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A loan applicant seeking financial assistance.	Secure a loan for personal or business needs.	My loan approval process is slow and uncertain.	My financial profile, income, credit history, and other eligibility factors need to be evaluated before approval.	Anxious and uncertain about whether my loan application will be approved.
